Coleman Quick-Lite

Catalog No. 36

HERE and there—in the midst of progress—are seen the fleeting shadows of the past. In far-away Asia crude farming is done with the cast-off implements of a by-gone age. Coolies still till the soil with forked sticks. Laborious—inefficient—unproductive—they live and do or die in their own unprogressive way.

Today a new era has dawned—man is not satisfied with the crude or inefficient—he demands the less costly—quicker—better ways.

Good Light—necessary to man's very existence—must be secured at the least expense and effort if he is to enjoy the blessings of his day.

Just as the coal oil wick lamp has supplanted the candle—so are Gas Generating lamps replacing the out-of-date kerosene lamps of yesterday.

Coleman Gas Generating Lamps are the Leaders. Sold Everywhere

Coleman Lamps and Lighting Plants

COLEMAN LAMPS, Lanterns and Lighting Plants belong to the class of lighting devices known as Vapor or Gas Generating Pressure Lamps. They make and burn their own gas from the fuel under pressure instead of burning the liquid in a flame, as is done with the common kerosene wick lamp.

Coleman Lamps are made with heavy, tight, metal tanks or founts so that the liquid cannot spill and so that the air pressure will feed the fuel to the burner. At the burner the fuel is converted into vapor and this vapor mixed with air, about 5 parts vapor, 95 parts air, forms a gas that is burned in the mantles, giving an extremely strong, bright, white light.

Mr. W. C. Coleman, inventor of the Gasoline Table Lamp and President of The Coleman Lamp Company. He perfected the match generating burner now used on all Quick-Lite Gas Lamps and Lanterns.

Thus a Coleman Lamp or Lighting System is, in reality, a small or miniature gas plant supplying a light superior to natural or city gas, serving its owner at a very low cost and if he be the proud possessor of a Coleman Lighting Plant he may attach to it a Coleman Stove on which his wife can cook in comfort on the hottest summer days.

Coleman Portable Lamps

Coleman Table Lamps, Lanterns, Portable Chandeliers, Portable Wall or Bracket Lamps, illustrated and described on pages 5 to 31 inclusive, are usually referred to as the Portable Line because each has its own fount for containing the fuel and so can be carried from place to place. This feature has made them popular but for lighting an entire home the complete lighting plants require less care and have the added advantage of making it possible to attach water heaters and burners or stoves for cooking.

Coleman Lighting Plants

A Coleman Lighting Plant consists of a supply tank, the tubing for conducting the fuel to the fixture and the fixture which, in this catalog, includes the shade, or globe, and mantles (See opposite page). Plants can be made up low in price or as expensive as the taste may suggest.

For Homes, Stores, Churches, Schools, Public Halls, Barber Shops and other business houses a Coleman Lighting Plant gives the greatest measure of satisfaction. The care and upkeep require but little time or expense as a tank of ample size will hold enough fuel to last a couple of weeks or even a month. Applying the pressure once a week is usually enough, while the care of the individual fixture has been reduced to the simple process of changing a generator, which, after six months use may become dirty.

A two or three light plant is often sufficient for the actual needs but we recommend plenty of fixtures. They give much better satisfaction than a plant of insufficient size.

Store Fixture

What a Coleman Lighting Plant Means in Your Home

In a home a Coleman Lighting Plant is a great convenience. It gives immediate light in any room without hunting up a lamp. The fixture is always in its place. One member of the family does not have to wait for or borrow the lamp from another. Father can read his paper in the living room while mother and daughter take care of the housework in the dining room and kitchen. The son has light in his room and an outside fixture may be placed where it will light up the porch or yard when outside light is needed. Any one or all may be used as desired.

A Coleman Lighting Plant furnishes a strong, bright, white light of any desired candle power in every room. By the light of a Coleman fixture added pleasure is given to the long winter evenings spent at home. Coleman light saves eye strain and fatigue for every member of the family, thus often preventing the early failure of the eyes. It also brings comfort and cheer into a home, besides giving you the satisfaction of distinction and up-to-dateness.

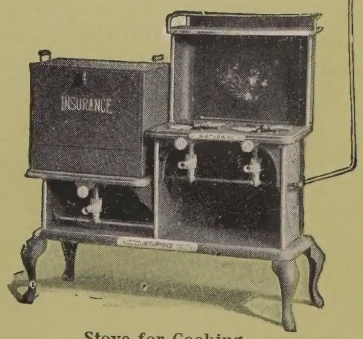
Just the Thing for Stores, Restaurants, Barber Shops, Etc.

Every wide awake business man realizes the importance of good light and the need for economy too—because he uses light many hours every month and his light bill is no small item of expense. With a Coleman Plant he can have an abundance of light at an extremely low cost. We are always glad of an opportunity to demonstrate this fact to any one who will give us the chance.

Supply Tank

For Churches, Schools, Etc.

The problem of securing satisfactory light for county churches is solved by a Coleman Plant. Good light in a church makes it attractive, draws the young folks and helps to keep up the interest in all departments. This is also true of schools, and every place where good light is needed. Coleman Plants are illustrated and described on pages 32 to 56.

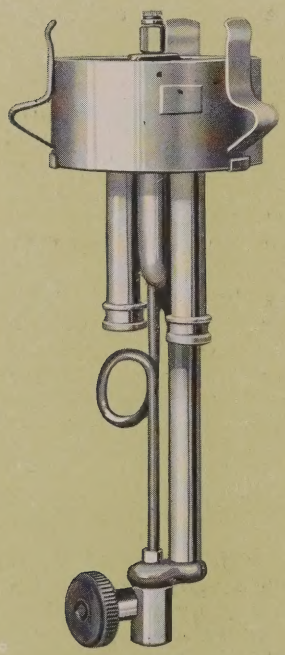


Stove for Cooking

Quick-Lite Match Lighting Burner

Before we made the Quick-Lite Burner all gas generating lamps and lanterns were lighted with an alcohol torch. This was because they were so constructed that it required a great deal of heat to start or "generate" them. That part of the burner called the generator was made large to give it capacity, and being large, a match did not give enough heat to generate it.

There have been many attempts made to produce a gasoline burner that could be lighted with a common match, but all such burners were failures until our Mr. Coleman perfected the Quick-Lite Burner, shown on this page. The Quick-Lite Burner does away with the torch and is a great success because of the simplicity of its generator. It is strictly a Coleman product and imitators are warned against infringement.



No. Q70. Burner.
Can be used on almost all makes of gasoline table lamps.

The Generator Is Simple

The Generator is made from a straight piece of copper tube, nine inches in length, properly packed and given one coil to increase its heating surface. On the upper end is the gas tip and on the lower end a single lock nut for securing it to the valve.

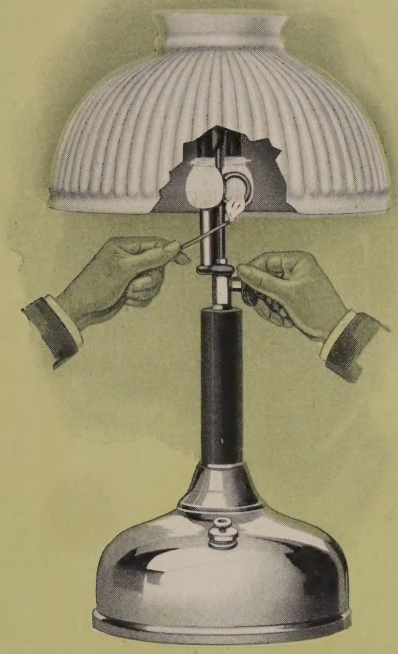
It is simple and inexpensive and, when, after six months or one year's use it becomes dirty it is taken out and thrown away, just as you would throw away an electric light bulb that had burned out. An extra generator is furnished with every burner so the user of a Quick-Lite Lamp or Lantern practically renews it when he takes out the old and puts in the new generator. This is easier and cheaper than cleaning any generator made.

A Great Convenience

The great convenience of the Quick-Lite Burner is at once apparent. It removes the usual objection offered to the gasoline lamp or lantern—"The bother of the alcohol torch"—It is especially convenient on the table lamps and lanterns, which are always within reach when lighting and because they are carried from place to place it is not always convenient to use alcohol for lighting them. The Quick-Lite Burner can be fitted to all old style Coleman table lamps, and some of our lighting fixtures. It can also be put on table lamps of other makes, providing only they have a good tight fount.

Torch Lighting Lamps

On account of the large number of torch lighting lamps and lanterns heretofore sold and still giving satisfactory service, the demand for them continues, so we manufacture and show both styles in this catalog. Coleman Lighting Fixtures are also made both ways. All lamps, lanterns and lighting fixtures using kerosene for fuel must be generated with the **alcohol torch.**



Coleman Quick-Lite Lamps and Lanterns

After briefly describing gas generating lamps, lanterns and lighting plants and the Coleman match lighting burner on the preceeding pages, we invite the reader's attention to a careful consideration of the advantages of the Coleman Quick-Lite Lamp over a common kerosene wick lamp, the cheap mantle lamps and the old style torch lighting gasoline lamps and lanterns.

The Quick-Lite has many distinct advantages over these other lamps, namely:

FIRST—*Their Safety.* The Quick-Lite can be turned over with perfect safety. As the fount is tight the fuel cannot spill. The lamp will burn in any position.

SECOND—*Quality of Light.* The Quick-Lite gives 300 Candle Power, the common wick lamp but 12 to 15, and mantle lamps from 50 to 100 Candle Power.

THIRD—*Quality of Light.* The Quick-Lite gives a strong, white, brilliant light, which, like daylight, is easy on the eyes. Common lamps usually give a weak, yellow and flickering light, injurious and trying to the eyes of both old and young.

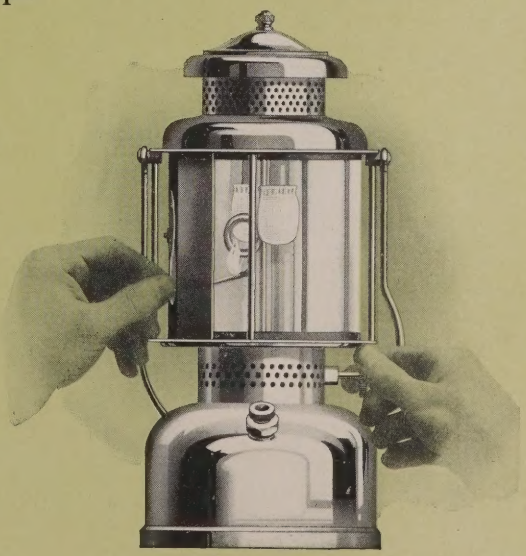
FOURTH—*Cleanliness.* The Quick-Lite has no chimney to get dirty. It has no wick to trim and does not fill the room with odor. Wipe the dust off; no other cleaning necessary.

FIFTH—*Convenience.* The Quick-Lite is filled once a week and not daily. It lights with a common match and not with an alcohol torch, like old style gasoline lamps.

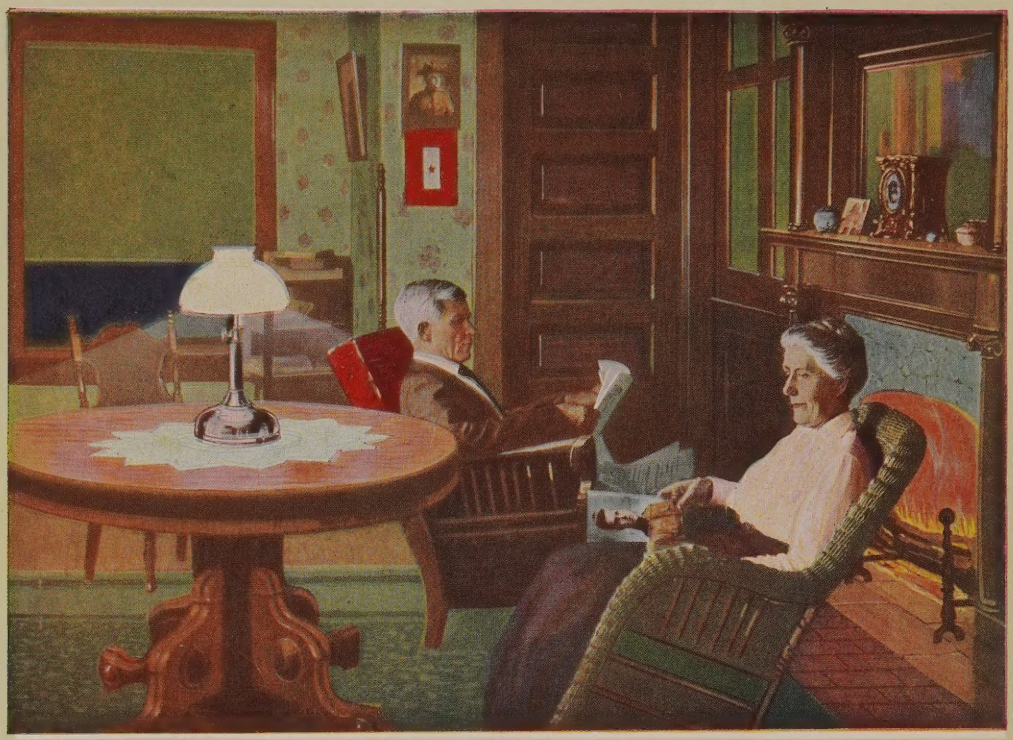
SIXTH—*Dependability.* The Quick-Lite is always ready, turn off the valve to extinguish it and it's r e a d y for the next night. The mantles will last from three to six months, according to the carefulness of the user.

SEVENTH—*Economy of Operation.* The Quick-Lite burns about 48 hours on one gallon of gasoline, costing a little over 1c per night for three hours use.

EIGHTH—*Durability.* The Quick-Lite is practically indestructible. It is made throughout of heavy gauge brass and steel and will last for many years. Coleman Reading Lamps are now in use after more than ten years service to the purchaser.



Solid Comfort With a Quick-Lite



MANY otherwise well furnished and comfortable homes are unattractive at night because they are so poorly lighted. Compare the above home with the average country fireside. In this room there is plenty of light without the occupants of the room crowding around the table and trying to read or work by the light of a dingy oil lamp.

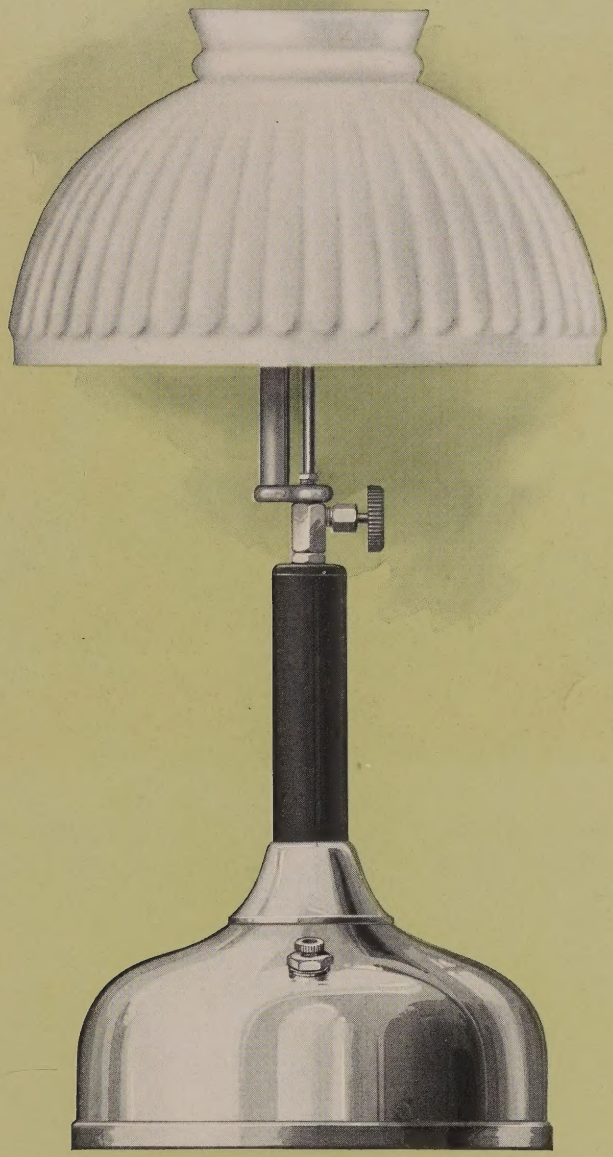
Parents too often forget this detail in furnishing a home. They are apt to get along with the old lamps, thus hastening their own failing sight and possibly causing permanent injury to the eyes of their children.

It is a false idea of economy to use an out-of-date oil lamp when a Quick-Lite, giving 300 candle power of bright, white light can be obtained at no additional expense.

GOOD LIGHT in the home is a wise investment. It brings more returns than Cattle, Hogs or Chickens. It yields dividends in comfort, pleasure and happiness to each member of the household, and the saving in the upkeep will soon pay for the cost of a Coleman Lamp.

The style of lamp you select for your home may be elaborate or as inexpensive as you wish. No. CQ307, shown on the opposite page, is fitted with a white opal porcelain shade, ribbed to relieve its plainness and one that is very popular.

No. CQ 307 is the lowest in price of any of the styles illustrated in this catalog. Other and more fancy lamps will be seen by the reader as he looks through the following pages.



No. CQ307. QUICK-LITE.

Gives a Strong White Light.
Has Match Lighting Burner—No Alcohol Torch Required.

LIGHT—300 Candle Power.
SHADE—White Opal Ribbed.

SHIPPING WEIGHT—9 lbs.

CODE WORD—*Leader.*

Good Light Makes Happy Homes

THE Coleman Quick-Lite is the great "Home Lamp". It is rapidly replacing the wick lamp in the American home and thousands of them are annually exported to all parts of the world.

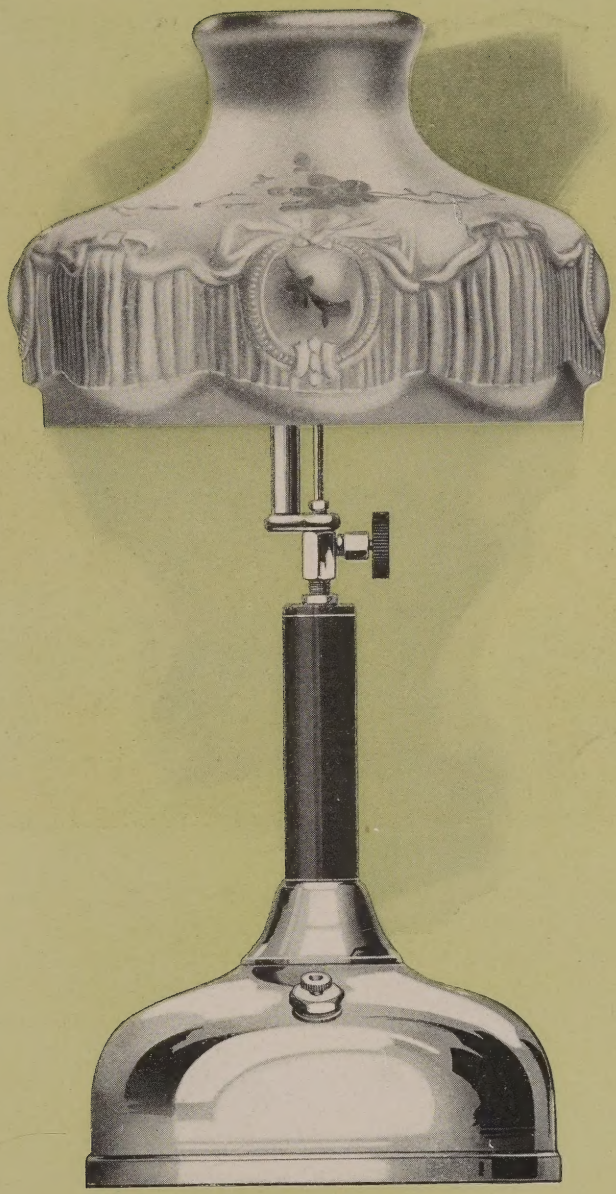
The Quick-Lite is instantly carried from room to room, is always available for the piano, the library table, or any other use for which it is needed. No. CQ318 is fine for the piano because it gives an abundance of light on the music without placing the lamp too near the player.

Fancy shades of various tints and colors may be obtained for all Coleman Lamps. The Quick-Lite is equipped with a universal shade holder that fits practically all shades made for gas or gasoline lamps.

NO. CQ318, shown above and illustrated and described on the opposite page, is equipped with our popular No. 318 shade. This shade is decorated in brown and tan tints and on a lighted lamp produces a soft mellow glow very pleasing in the room and restful to the eye.

This shade is in no sense gaudy, but is purchased by those who prefer a touch of color in a shade. It softens the strong rays from the lamp and sheds a wealth of beautiful light throughout the room.

No. CQ318 is one of our most handsome lamps. We have handled this shade for years and it has always been a good seller. It is low in price but rich in appearance.



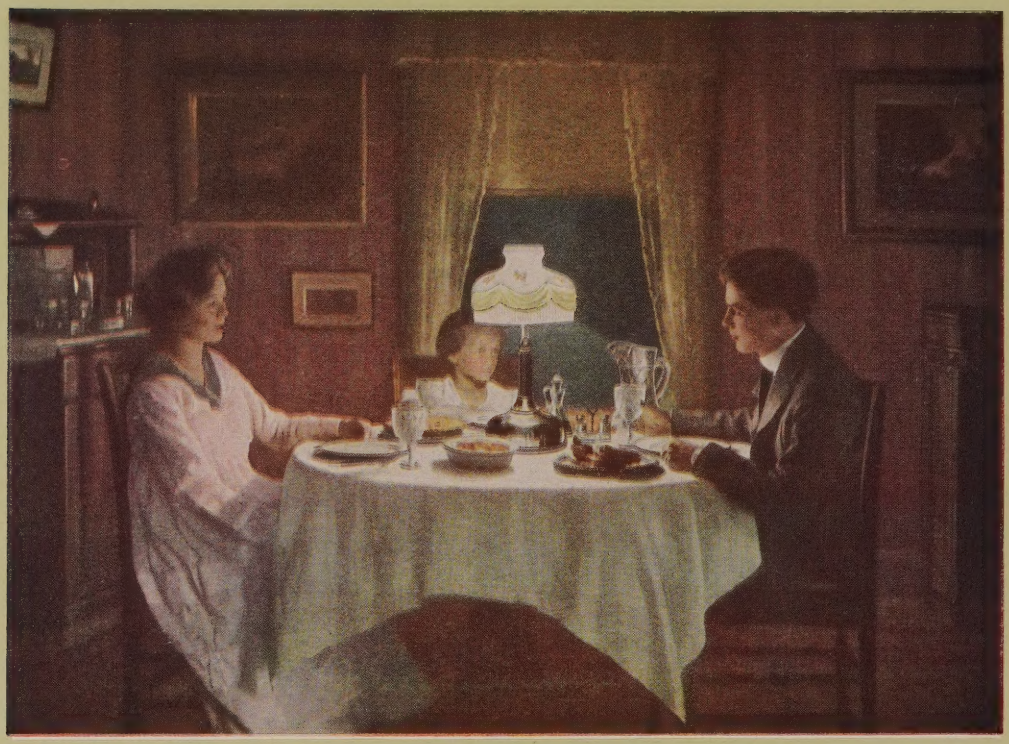
No. CQ318. QUICK-LITE.

Produces a Soft Mellow Light.
Has Match Lighting Burner—No Alcohol Torch Required.

LIGHT—300 Candle Power.
SHADE—Brown and Tan.
FINISH—Nickel Plate.
FUEL USED—Gasoline.
DIAM. OF FOUNT—8 Inches.
CAPACITY—3 Pints.
HEIGHT—20 Inches.
SHIPPING WEIGHT—10 lbs.

CODE WORD—*Liberal.*

A Handsome Dining Room Lamp



JUST as a piece of good furniture or a good rug or carpet adds to the beauty and utility of a room, so a Coleman Lamp with a handsome shade gives a touch of refinement to any home.

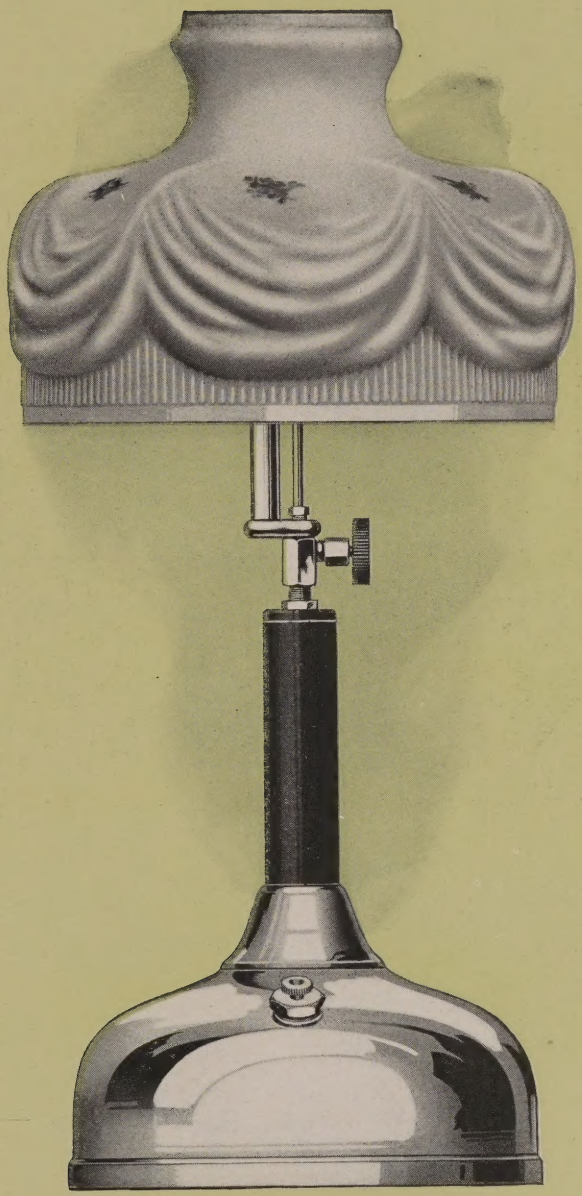
One of the greatest pleasures we enjoy in this world is derived from the purchase for our families of the household necessities used in our daily lives, and there is no greater necessity than good light in the home.

Good light is not only appreciated by every member of the family, both young and old, but when it is supplied by the Quick-Lite it actually costs less in dollars and cents than the inferior light of the common kerosene lamp.

NO. CQ324 Quick-Lite is our regular lamp fitted with No. 324 shade. This shade is twelve inches in diameter, well proportioned and decorated in green tints with six small wild roses, one in each panel of the shade.

Compare the above scene with the home lighted by a common wick lamp. The Quick-Lite gives as much light as twenty oil lamps and is free from the disagreeable odor, and all the other objections to the kerosene lamp.

No. CQ324 Quick-Lite is not only beautiful in itself, but its bright rays on the table and the subdued light which it sheds throughout the room produce an effect impossible to secure with the largest or most expensive oil lamp made.



No. CQ324. QUICK-LITE.

Handsomely Decorated Mellotone Opal Shade.
Has Match Lighting Burner—No Alcohol Torch Required.

LIGHT—300 Candle Power.
SHADE—Decorated Mellotone.

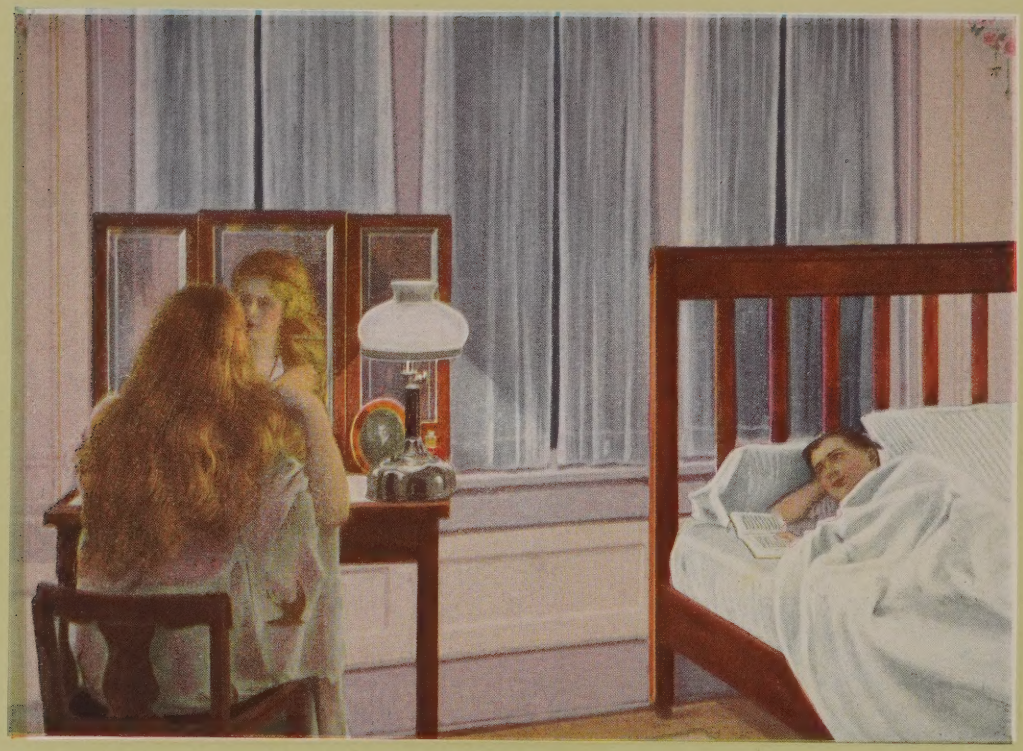
CODE WORD—*Lifelike.*

Convenient For Bed Room Use



IN homes where a complete Coleman Lighting Plant is not installed, a sufficient number of Quick-Lite Lamps should be purchased so that every member of the family may be supplied with light.

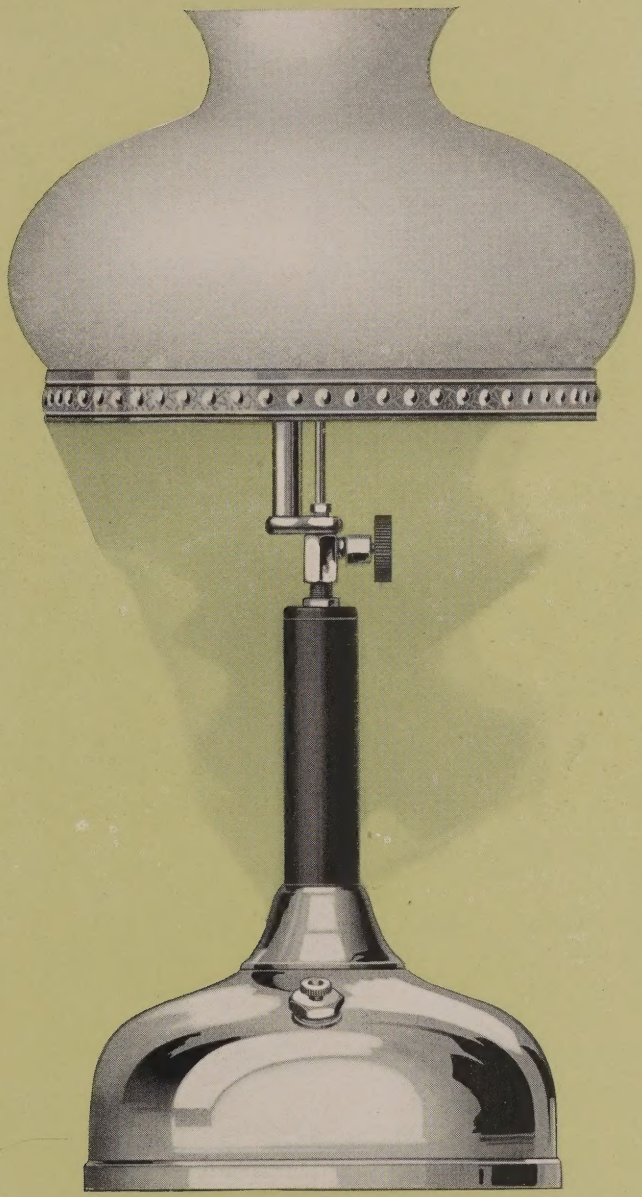
There should be a lamp for use in the living room, one for the dining room, and one for the kitchen. Some homes will find two sufficient, but if the family is large, three Quick-Lites will not be too many.

A sewing machine is purchased for mother, a piano for daughter, a lantern for father, and something else for son, but every member of the family needs light. The Quick-Lite is instantly taken to the bed room after it has served the family around the fireside all evening.

FOR use in all parts of the house No. CQ317B Quick-Lite is one of the most appropriate. It has sufficient beauty for the parlor, the living room, the dining room, or the guest chamber. It is not elaborate or highly colored, but has really a handsome shade.

No. 317B is a twelve inch crystal shade, roughed outside and smooth inside. It is ornamented with a nickel plated band, which adds to its attractiveness and also serves as a protection to the edge against chipping in shipping or handling.

This shade is one of our popular styles and is preferred by many to shades furnished with a fringe. It casts no shadow and is a very practical shade for constant use.



No. CQ317B. QUICK-LITE.

A Crystal Shade With Nickel Band.
Has Match Lighting Burner—No Alcohol Torch Required.

A Quick-Lite in the Kitchen

A QUICK-LITE in the kitchen is a profitable investment for many reasons. Not only does it make the housework easier and more quickly done, but it actually costs less to supply it with fuel and gives twenty times the light of the common oil lamp.

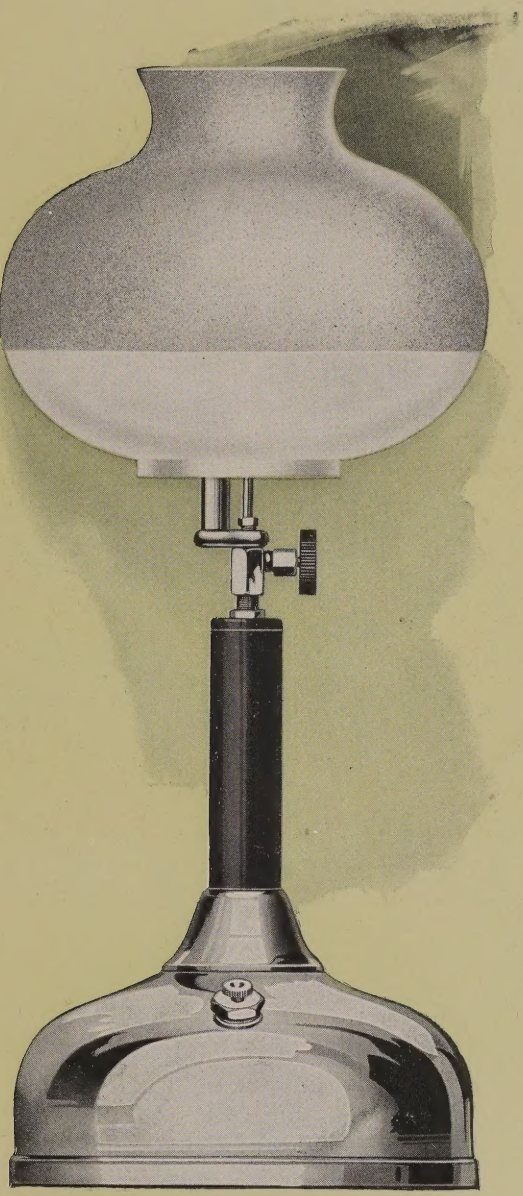
Where a lamp is more or less exposed to drafts and where bugs get into the room a globe is better to use on the lamp than a shade.

For this reason we recommend No. CQ321 Quick-Lite as a good selection for kitchen use. If the user desires to economize and wants a more fancy lamp in the other rooms an extra shade may be purchased and used on the lamp when the housework is done in the kitchen.

NO. CQ321 Quick-Lite is fitted with our No. 321 globe. This globe has upper half frosted and lower part clear glass.

It is designed to protect the burner from cold drafts and to prevent bugs from flying into the mantles while the lamp is in use. This globe is better than a shade to use in partially exposed places as cold air continually striking a lamp will cause it to flare up and smoke the shade.

In kitchens with low ceilings, or in rooms where it is not convenient to use a table lamp for lighting, we suggest our Bracket or Wall Lamp, either No. BQ 307 or BQ 321, as preferred by the purchaser. They can also be used as table lamps as will be seen from the illustrations.



No. CQ321. QUICK-LITE.

With Half Frosted Bug Proof Globe.

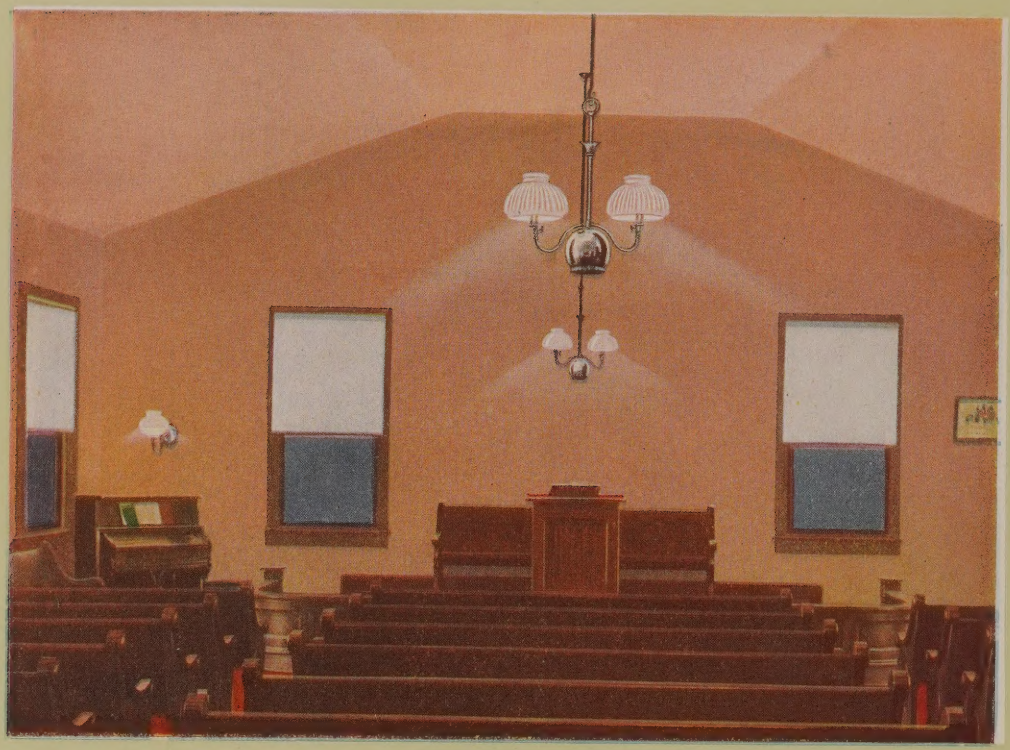
Our Portable Church Chandelier



COLEMAN Portable Chandelier No. PQ307 makes a convenient and handsome lamp for country churches, stores, schools, lodge rooms, halls, public buildings, or any large room requiring more than a single burner lamp.

One or two chandeliers, and perhaps a bracket or wall lamp, will furnish all the light needed by the average village or country church. They will cost less to purchase than a regular Coleman Lighting Plant and have the added advantage of being quickly taken to other buildings or rooms for temporary use.

They are usually suspended from the ceiling by a rod having a hook on the lower end. This rod may be made by any blacksmith.

NO. PQ307, shown in the above church, is distinctly a Coleman product and is a popular lamp. It is made of brass heavily nickeled and fitted with our universal shade holder, on which other shades or globes may be used.

This lamp is complete within itself, the fount holds six pints of fuel and either one or both burners may be lighted as desired. Like all Quick-Lites, it has our latest improved match lighting burner, which is especially convenient in public places where it is not always possible to have the lamp lighted by the same person.

The extra generators insure the purchaser a year's use of the chandelier with no expense for extras.

No. PQ307. CHANDELIER WITH SHADES.

A Splendid Light for Many Uses.
Has Match Lighting Burners—No Alcohol Torch Required.

Good Light is a Good Investment

A COLEMAN Chandelier is one of the best lights a country merchant can purchase. If he is hanging up table lamps to light his store he should sell them to his regular trade and use the chandelier because it accomplishes two important objects.

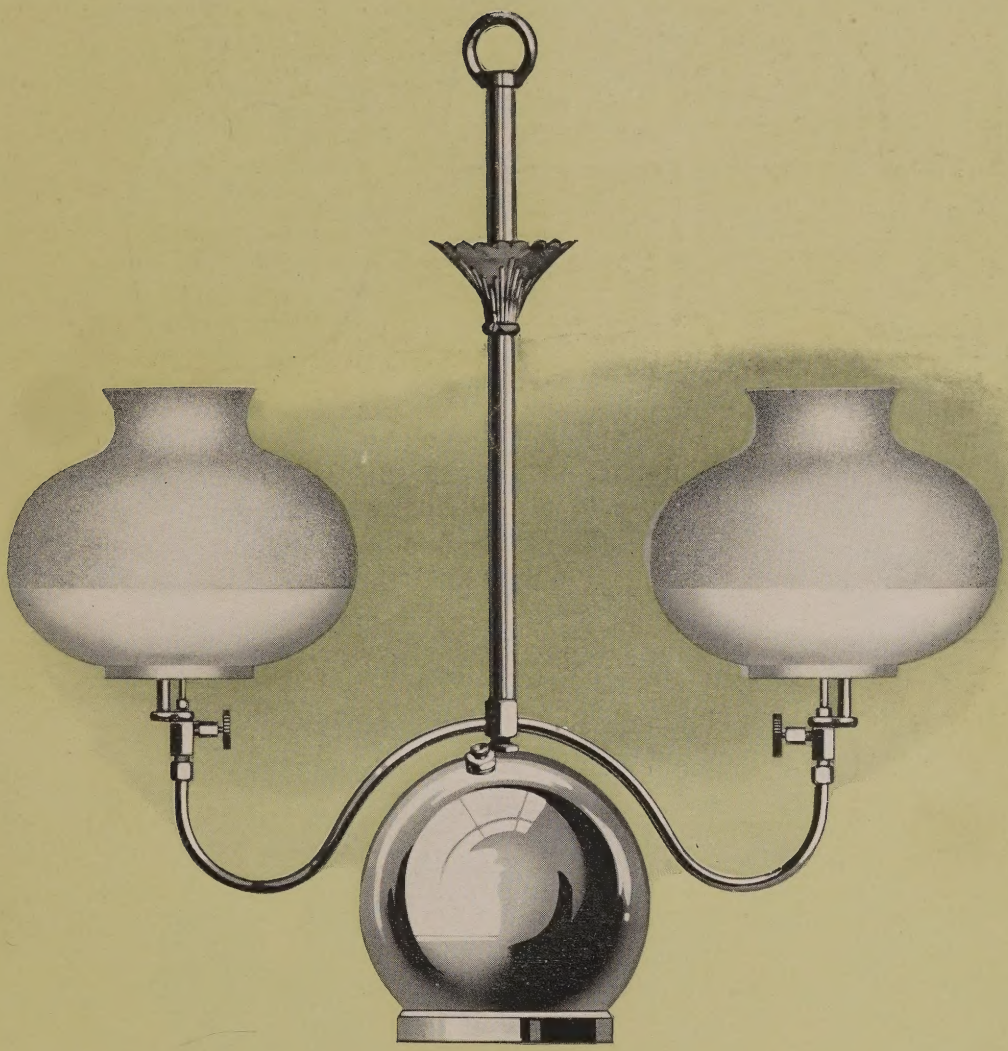
First—It gives him an abundance of good light for his own use at a very low cost, and

Secondly—It is a constant advertisement for him among his fellow merchants, school and church boards, and others who are possible customers for these lights. Live dealers take advantage of this double purpose and many of these lamps are sold every year in this way.

NO. PQ-321 Chandelier with bug proof globe is recommended for use in stores because the globe is a better protection to the lamp than the ordinary shade. Wherever a lamp or chandelier is exposed to cold air drafts, or where bugs are liable to fly into the mantles, No. 321 globe should be used.

Wide awake merchants realize the value of good light in a store. Good light attracts people from the street and adds to the appearance of the interior. It also renders the merchant real service by enabling him to quickly find what he wants, and helps the customer to decide upon his purchase.

No. BQ321 Bracket Lamp is also convenient for wall or desk use.



No. PQ321. CHANDELIER WITH GLOBES.

The Globes Furnish Ample Bug Protection.
Has Match Lighting Burners—No Alcohol Torch Required.

Quick-Lite Lanterns

The Quick-Lite Lantern is indeed the Farmer's Friend. It is his companion and assistant in all kinds of night work. It gives him twenty times the light of the common wick lantern, will burn in the wildest wind or storm, and is safer than any oil lantern made.

In the barn or milking sheds, around the feed lots, for all kinds of choring the Quick-Lite is indispensable. It can be used as a tractor head light for night plowing or harvesting, for opening irrigation ditches, for use in potato cellars, and for night repairing about the farm.

"The Lantern of a Thousand Uses"

In addition to the many uses on the farm, ranch and country place, the Quick-Lite Lanterns are purchased by Hotel and Liverymen, Night Watchmen, Garagemen, Plumbers, Sportsmen, Hunters, Campers, Fishermen, and everyone having need for a strong, dependable outside light.

It is bought by Railroads, Steamship Lines, Mining and Ditching Companies, Contractors on large buildings, on Government work and all kinds of construction having need for artificial light. It is used in the Forestry Service, Agricultural and other Experiment Stations, and many Government institutions. It is a great emergency light worth many times its cost about Mills, Elevators, Factories, Public Schools, Colleges and State Institutions.

The Quick-Lite has no equal for small Tent Shows, Camp Meetings, Street Stands, and Summer Amusements. It is used in front of stores and churches, and to light the streets of small villages. Merchants find constant use for it about their stores and to take home with them when keeping open late.

On the Land or On the Sea

Boatmen report the Quick-Lite absolutely dependable at sea. It is not affected by wind or spray. It is used by lighthouse tenders and adopted by the Army and Navy Departments for the most severe use. Life saving crews and other hazardous work require the Quick-Lite Lantern.

It is the one great light that will burn in any storm and because of its light giving power and wind resistance can be used in hundreds of places where the common oil lantern is useless.

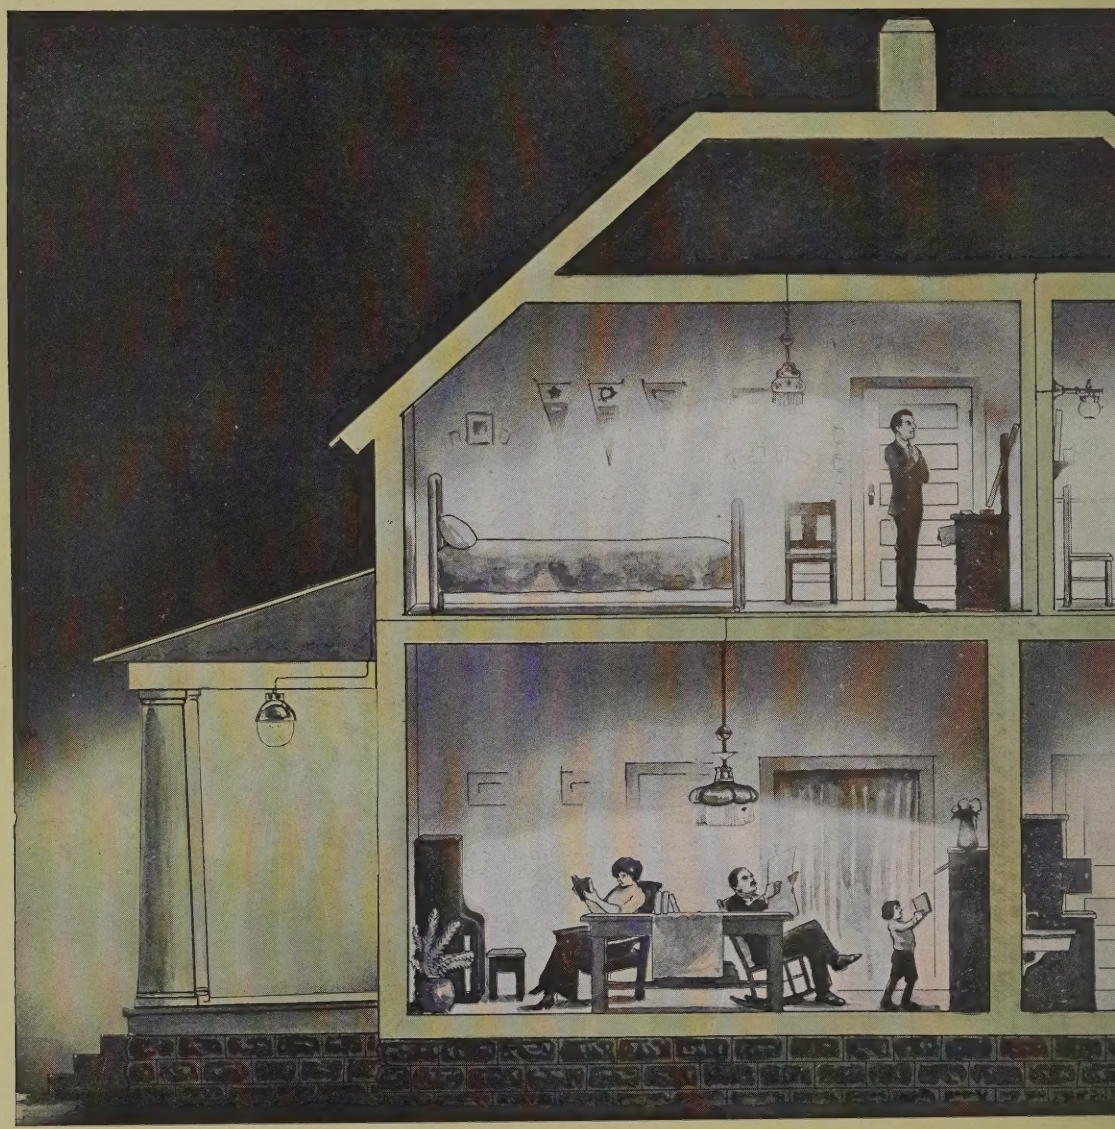
Make Your Home Modern



Gas for Lighting and Cooking

A COLEMAN Plant is easily installed. It does not require a skilled mechanic. We send the fixtures of proper length, cut the wires to fit, attach the connections and enclose complete instructions so that anyone can put it up. Each fixture or stove is independent of the others, any one or all of them may be used at one time.

With a Coleman Gas Plant

Gas Lanterns for Outside Work

LET US tell you the cost of a Coleman Plant for your home. Just send us a rough floor plan showing the way your rooms are arranged and tell us the height of the ceiling. We will then be glad to suggest suitable fixtures for each room and furnish estimates showing the cost of different plants from which you can choose the one you like best.

An Abundance of Good Light

COLEMAN Lighting Fixtures cover all needs, from the humble home to the luxurious residence. They are made in a large variety of styles and can be equipped with plain globes or shades as fancy as the purchaser may desire.

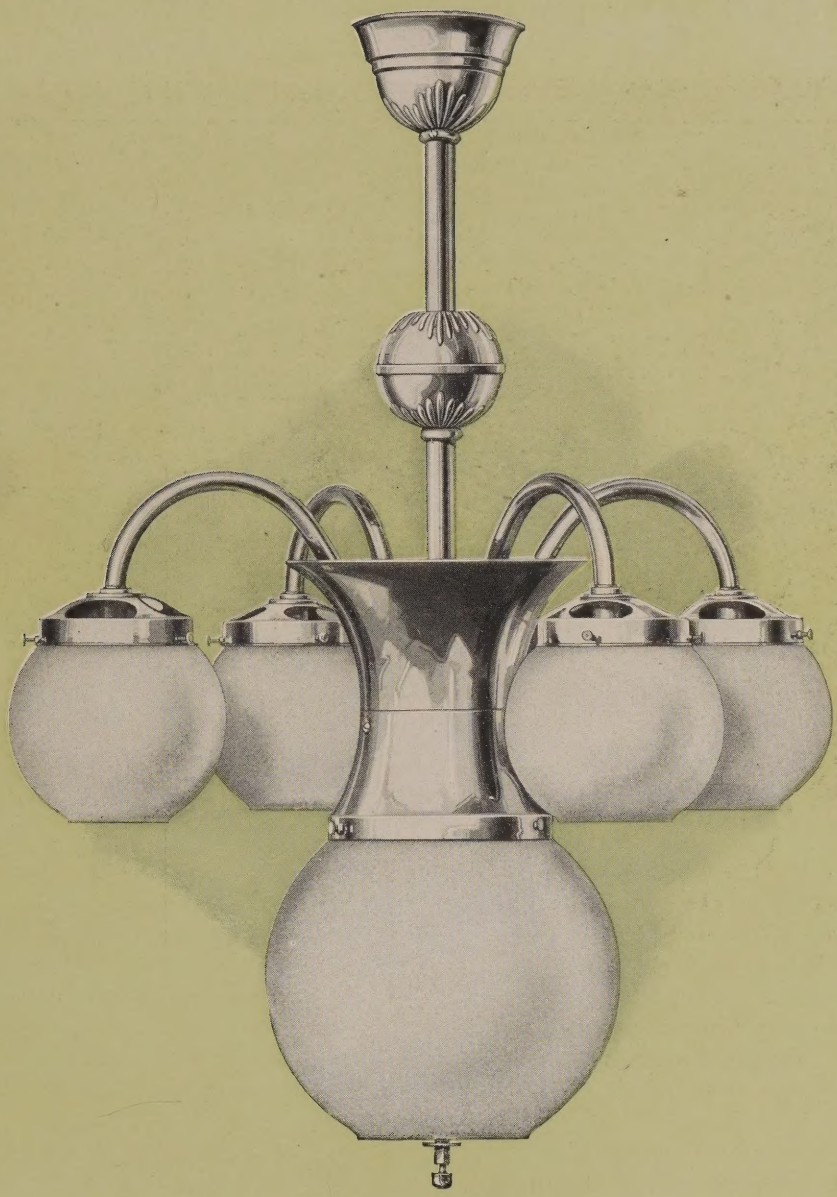
The difference in cost between a fixture of ample size and one that may seem good enough is not large and experience proves that the greatest measure of satisfaction in any article comes when we purchase the one that fully meets all requirements.

The above room is so well lighted that every member of the family can read or write at any distance from the fixture. This is a great comfort and convenience where the family is large.

NO. 17SA Fixture, illustrated above in actual use in a home, and briefly described on the opposite page, is the well known Coleman Chandelier, made for many years and gives the highest candle power of any lamp in our line.

A single generator and three mantle burner supplies the fixture. The four arms each have a single mantle and require no generating. It lights from the floor by means of a torch that opens the valve without the use of chains or the necessity of climbing up to the fixture.

If desired with fancy shades instead of the globes illustrated, a selection can be made from styles of proper size, shown on pages 60 and 61.



No. 17SA. CEILING CHANDELIER.

Brilliantly Lights a Space 30 Feet in Diameter.
One Burner Serves Entire Fixture. Lights with Floor Torch.

LIGHT—1400 Candle Power.

An All Purpose Residence Lamp

VERY often a 300 candle power fixture will be found sufficient for any room in the home. Where this is true we recommend the No. 25 as an ideal selection because it can be equipped with a globe or shade adapted to the room in which it is to be used.

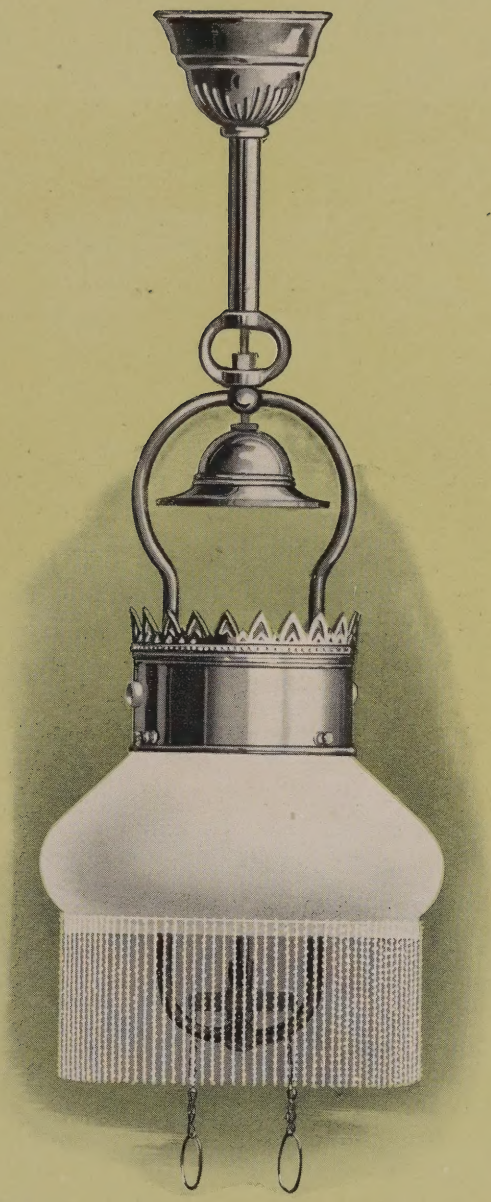
When placed with the bottom of the fixture six and one-half feet above the floor it will shed a strong light over a radius of fifteen to twenty feet.

No. 25X with No. 311 shade and crystal fringe will harmonize with the furnishings of almost any room, and is one of our most popular lamps of medium price. No. 25 Lamp with suitable shade is a good one to use throughout the whole house.

NO. 25X Fixture has been one of our best selling lamps for several years. It never fails to satisfy and because of its convenience and simplicity is especially popular with people having little experience with gasoline lamps.

It has two strong points of excellence, the ease with which the generator may be removed and the convenience of the valve. It generates very quickly by means of a floor torch, and is furnished with a chain pull valve unless the wheel valve is specified.

The No. 25 lamp may also be used with the No. 74 shade or No. 78 globe, and is an excellent fixture for small stores, barber shops and similar places.



No. 25X. CEILING FIXTURE.

An Excellent Light for the Average Room.

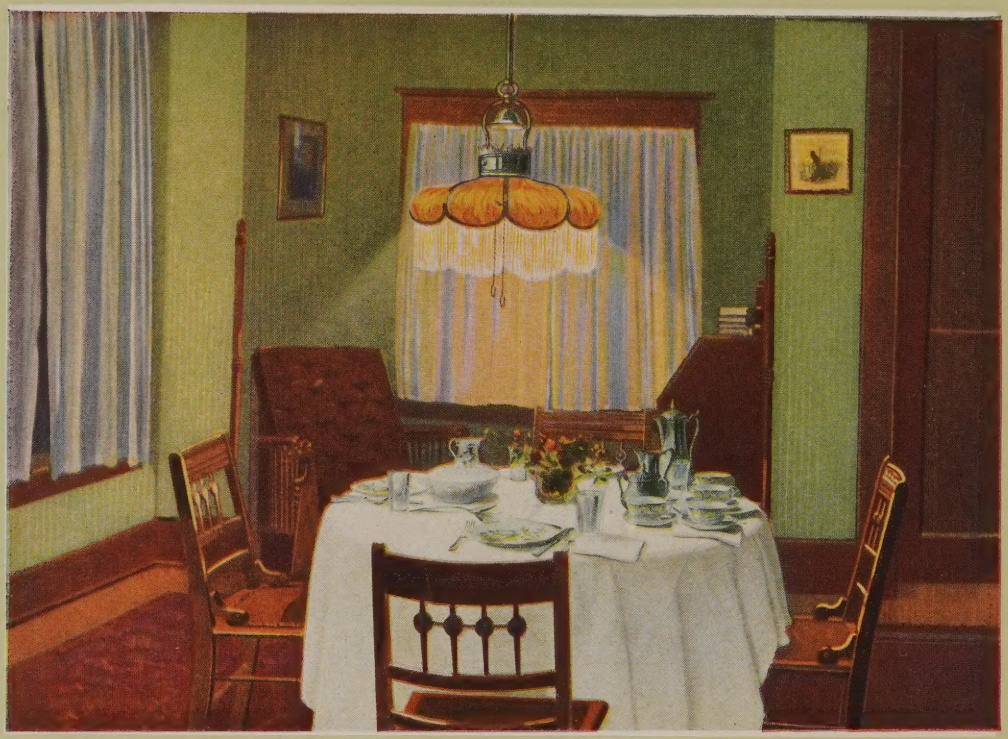
A Well Lighted Dining Room



EVERYONE likes a well lighted dining room. Nothing adds more to the cheerfulness of a meal than good light and pleasant surroundings. Here is where we gather with our friends around the festive board for social pleasure and enjoyment. Here is where the family congregates three times a day, and the evening meal may be made one of added pleasure if good light is provided in the dining room.

Coleman Fixtures bring all the elegance and comfort of city convenience to the rural dwelling. They enable the farmer and his family to enjoy the best of light at a cost within the reach of all.

The lamp used in the above room is also suitable for the living room.

NO. 25W Fixture used in the above home and illustrated on the opposite page is one of our most popular lamps. It is made throughout of brass, has a quick detachable generator easily removed for cleaning or renewing, and is furnished with chain pull or plain valve, as desired by the user.

This lamp is equipped with No. 315 shade, the most handsome one in our entire line. It is an art glass amber colored shade made in panels, securely held in place by metal strips which are finished in brush brass.

We recommend placing the dining room fixture about five feet from the floor as this brilliantly lights up the table.

FITTER—4⅞ Inches.
LENGTH—48 Inches.
SHIPPING WEIGHT—40 lbs.

CODE WORD—*Palace.*

A Convenient Bed Room Light

A BED Room Fixture need not be elaborate or expensive. It should be simple, easily lighted and require but little care.

We recommend our No. 30P Fixture as meeting every need for bed room use. It is plain in design, low in price and has our simple match lightning burner. It requires practically no attention and can be fitted with a large variety of fancy shades, if an ornamental lamp is desired.

For bed room use it should be placed six or six and one-half feet above the floor as this distance makes it easy to turn the lamp on and off. This is especially convenient when it is necessary to light the lamp during the night.

NO. 30P Fixture consists of our standard ceiling plate, canopy and casing with arm and regular Quick-Lite burner. It is made of brass, nickel plated and up to the Coleman standard in every way. It is one of the simplest lamps it is possible to make and has our universal shade holder.

The hollow wire supplying the fixture attaches to the arm where it screws into the ring connection. With Coleman lamps all couplings are in sight and easily accessible, thus avoiding leaky joints so common in poorly constructed lighting plants.

The regular length of No. 30P Fixture is 30 inches, but they may be ordered in any length desired.

No. 30P. PENDANT LAMP.

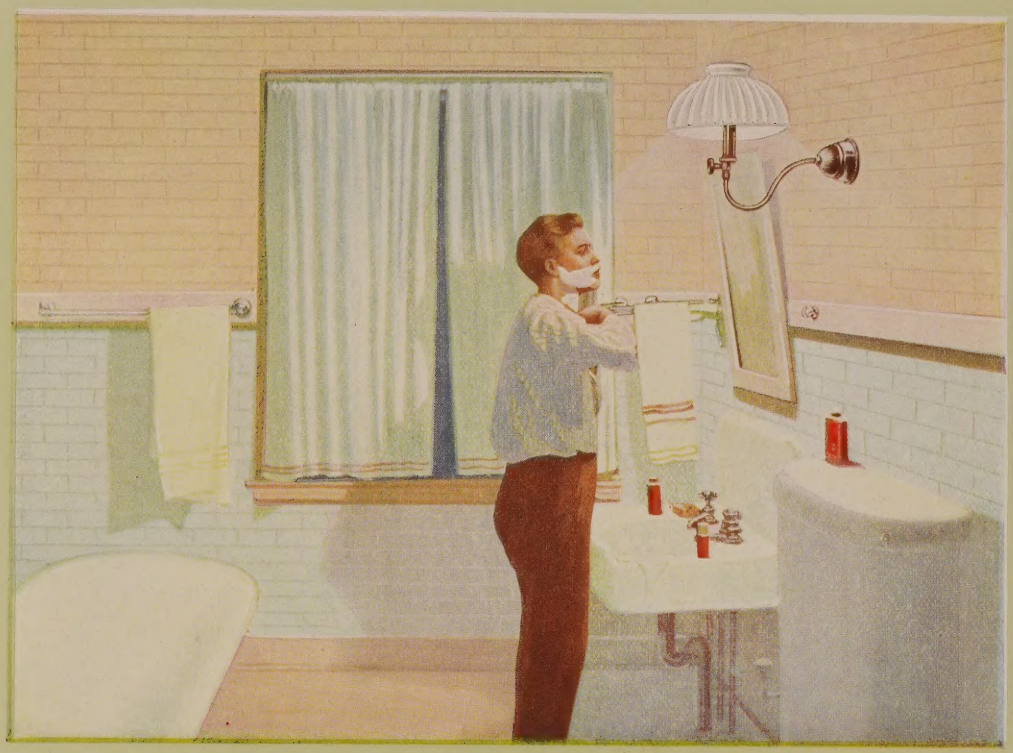
SHIPPING WEIGHT—8 lbs.

CODE WORD—*Palisade.*

Bath Rooms Need Good Light



THE modern bath room should be well lighted because in it the men shave and the ladies make their toilets. For bath rooms of ordinary size one bracket lamp is enough, so we recommend the No. 31P fixture or similar shade.

It is located on the wall out of the way but still is within easy reach and throws the light just where it is wanted—near the mirror.

It is little conveniences like this that often makes one home more attractive than another. Parents too often forget that their boys and girls become dissatisfied with their own rooms or home just because they have failed to provide simple conveniences which their associates regard as necessities.

NO. 31P, illustrated above, and No. 31R, shown on the opposite page, are good fixtures for a bath room or for all places where it is desirable to use a wall light. These fixtures have the regular Quick-Lite burner, the universal shade holder, and are supplied from a storage tank placed where it will serve all the lights in the home.

One of the advantages the installing of a complete lighting plant has over the portable lamps in a home is that the fixture is always in its place, and ready for use.

If the supply tank is filled once or twice a month and the air pressure applied occasionally the fixtures may be lighted in an instant and the room flooded with a strong light.

Good Light for the Housewife

THE old adage, "Man's work is from sun to sun, but woman's work is never done", should be remembered when considering the question of home lighting.

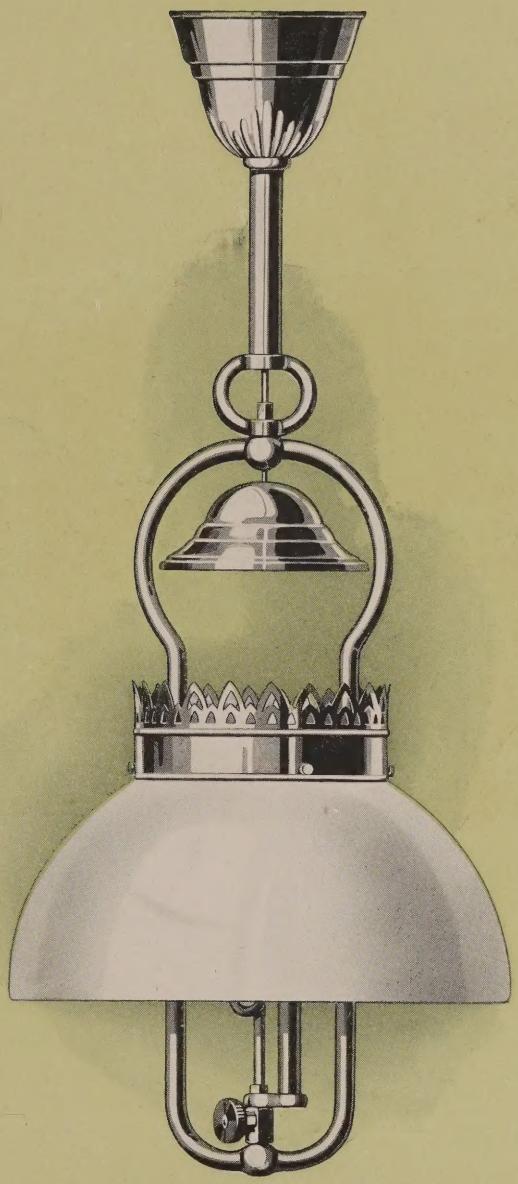
For the few dollars they cost it would be difficult to find any household utility that affords greater pleasure or satisfaction than a Coleman Lamp provides in the kitchen. This is the room in which much of the after dark work of the housewife is performed, and she is certainly entitled to this convenience.

A lamp like the one shown in the above illustration will give plenty of light for the largest kitchen and enable the women folks to do their work in much less time than in a dimly lighted kitchen.

NO. 35M Lighting Fixture is one of the handiest residence lamps in our entire line. It is made by combining the No. 25 frame with our regular Quick-Lite burner. It has a 4⅞ inch fitter and can be equipped with No. 311 or No. 315 shade, if preferred by the purchaser to the No. 74 illustrated in the fixture.

It is one of our fastest selling residence lamps and is suitable for the use in every room of the ordinary home. There are many advantages in having the same kind of lamps throughout the house, the glassware is interchangeable and the same size of mantles fit all the lamps.

Furnished with chain pull or regular wheel valve at the same price.



No. 35M. CEILING FIXTURE.

One of Our Most Popular Styles for General Use.
Has Quick-Lite Match Lighting Burner with an Extra Generator.

The Best Church Fixture Made

THE value of good light in a church cannot be estimated in dollars and cents. Every pastor knows that anything which adds to the attractiveness of the church interior is a good investment.

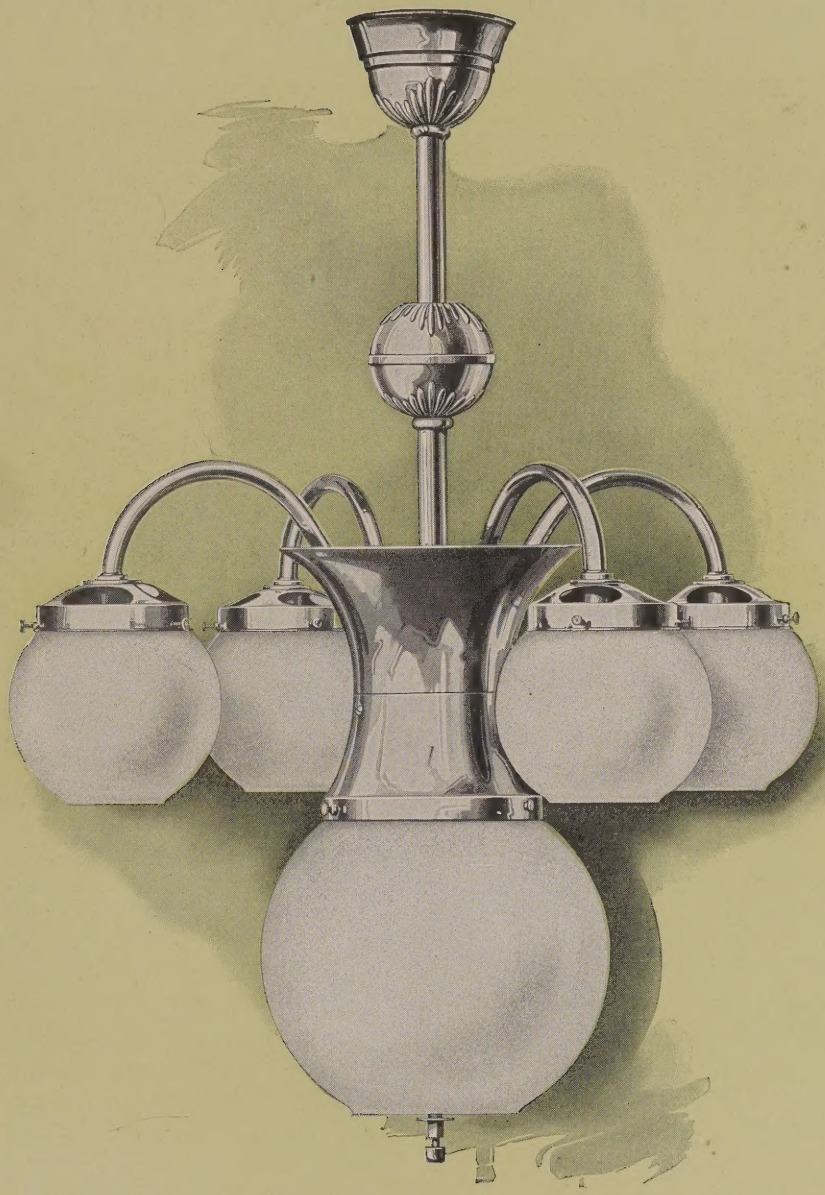
Fixture No. 17SA has no equal for church lighting. It is handsome in appearance and has style as well as utility. For over 7 years we have sold this chandelier to churches, schools and stores, and have yet to learn of a dissatisfied user.

Good light in the church is a great aid in holding and keeping up the interest of the young people. The funds required to purchase a Coleman Plant can often be raised in the first service after the lights are installed.

THE Coleman Chandelier, shown above, is our No. 17SA Fixture, supplied like all lamps in our lighting plants, from a steel tank placed in a convenient location.

This fixture is solidly built. It has heavy cast brass burner, brass burner tubes, body shell and arms. The supporting rod is five-eighths inch black iron pipe covered with brass casing, and all highly nickel plated. The main burner has three, and the arms one, No. 41 mantle.

In some parts of the church or store a two-arm fixture, giving 1,000 candle power, is sufficient. When this is desired order No. 15SA Lamp. A saving can be made by ordering these chandeliers less the casing and painting the black iron pipe.



No. 17SA. CHURCH CHANDELIER.

Our Best Church Light. Casing Furnished any Length.
One Burner Serves Entire Fixture. Lights with Floor Torch.

LIGHT—1400 Candle Power.

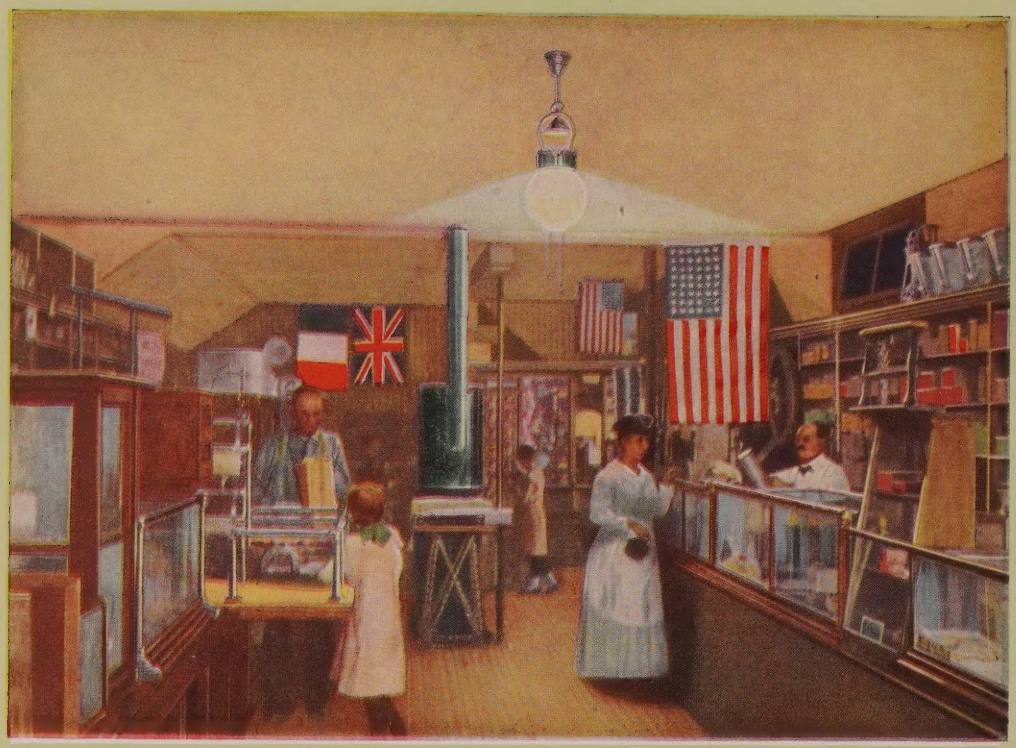
High Candle Power at Low Cost



WITH a Coleman Lighting Plant the country storekeeper can have just as much light as he wants at far less cost than his city friend pays for lighting his store.

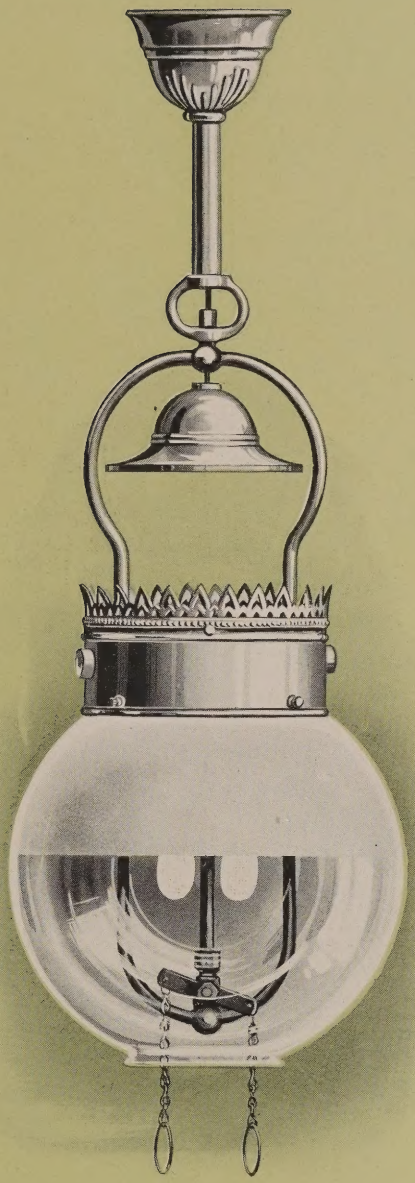
No merchant can afford to do business in a poorly lighted room. It not only results in actual loss of time and money, but creates an unfavorable impression in the public mind of the business methods and enterprise of the proprietor of the store.

The No. 27S lamp, used in the above room, gives 1,000 candle power of brilliant, white light. It is equal to the average street arc light in intensity, and when placed in a room 25 feet wide sheds its rays to the most remote corner of the store.

WE invite a careful examination of our No. 27S store fixture, we think it is the best store light on the market today and the best one we have ever made.

This lamp produces more and better light for less money than electricity, acetylene tube systems, or the best oil lamps made. We do not hesitate to give it our strongest endorsement as it has never yet disappointed a customer.

The No. 27 Lamp is made throughout of brass heavily nickeled and will last for years. It uses two large mantles and has a quick removable generator. A floor torch is used for lighting it and it can be furnished with a shade if preferred. It is also a very good church light.



No. 27S. STORE LAMP.

This is Our Best Large Mantle Fixture for Stores, Barber Shops, Churches and All Places Where a High Candle Power Light Is Required.

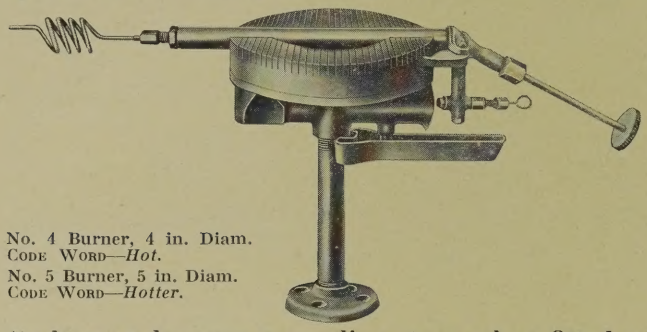
Coleman Gasoline Urn Burners

Coleman Urn Burners have been put on the market to meet the demand for a gasoline burner to be used where natural gas cannot be obtained, or where decreasing gas pressure makes some other method of heating necessary. They can be attached to any hollow wire lighting system or used independently.



No. 4 Burner, 4 in. Diam.
CODE WORD—*Hot.*
No. 5 Burner, 5 in. Diam.
CODE WORD—*Hotter.*

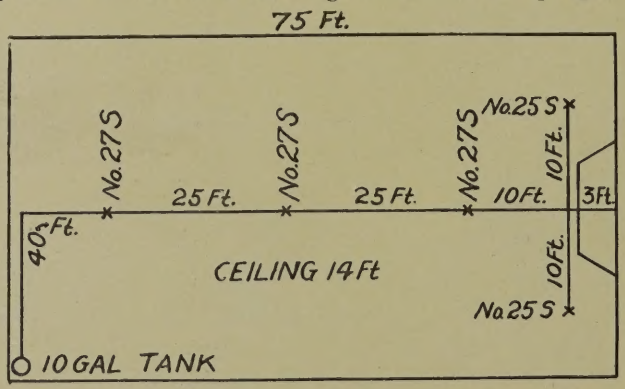
They are just the thing for use in restaurants, lunch stands, barber shops, doctors' offices and all places where a light, quick fire is wanted, but are not adapted to use in heating stoves or furnaces. They are better for gasoline stoves than the gravity burner, because a gasoline stove when fitted with Coleman Burners may be supplied from an outside tank, which not only makes the stove safer and handier, but gasoline under pressure gives a hotter fire.

Instructions for Ordering a Coleman Lighting Plant

FIRST: Draw on a sheet of plain paper a floor plan, or rough diagram, of the building to be lighted. Show on this plan the location of the lights by an X and insert the catalog number of the fixture selected.

SECOND: Decide upon the location for the supply tank, preferably outside of the building, but if not convenient it may be placed inside. Measure the distance from the tank up the wall and along the ceiling to the first lamp, allowing for a foot or two of extra wire, and note this measurement on the plan. Then measure and show the distance from the first lamp to the second, from the second to the third, and so on until all lamps are reached and the measurements appear on the plan. If any branch lines are necessary, show the distance from the tank or lamp to the connection leading off the main wire, and the distance from the connection to the next lamp.

THIRD: Tell us the height of the ceiling and the distance you want the bottom of the fixtures from the floor, but do not include any drop wires as we will provide them when making the fixture the proper length. Advise us the size of tank wanted and the quantity of extra mantles and glassware, and we will have all the information needed to fill your order. We cut all wires to exact length, braze a union connection on each end of every piece, and ship the plant all ready to install.



We Manufacture All Coleman Mantles

Coleman Mantles are all made in our own factory by experienced people, from the best materials and by the most modern machinery and processes. We manufacture our mantles to insure the purchasers of gasoline lamps the highest quality of mantles that it is possible to produce, and this will always be our policy.

No. 40 Standard Rag, 4 in. long.
CODE WORD—*Standard.*
No. 41 Junior Rag 2½ in. long.
CODE WORD—*Junior.*

The regular mantle manufacturers are in the business of making mantles and do not make lamps, so their interest lies in the profit they make on their mantles. The Coleman Lamp Company is principally interested in the success of its lamp business, so it is anxious that the users of its lamps are supplied with good mantles.

Good mantles help the sale of lamps and lanterns by giving the user a light of higher candle power and by giving longer service than he would get from poor mantles. Good mantles are less expensive in the end and less bother because requiring less frequent replacement. In like manner inferior mantles injure the sale of lamps and lanterns by creating the wrong impression that gasoline lamps are hard on the mantles and therefore expensive to use.

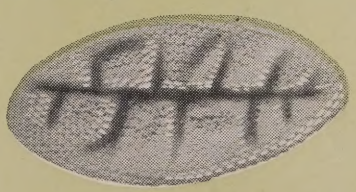
Coleman Mantles Have a Reinforced Bottom

The attention of mantle dealers is invited to a careful study of the construction of Coleman Mantles as compared to the common mantles now offered to the trade.

Coleman Mantles are made with a reinforced bottom. This is the point where they are subjected to the greatest pressure. By pleating or gathering the fabric while cross sewing the bottom we produce a mantle that is materially strengthened. Common mantles sewed in the ordinary way will often open at the seam, usually rendering them useless at once. Thus a Coleman Mantle is strongest at the point where the gas pressure strikes it, and will outlast any mantle which has come to our notice.

Try This Test on Your Lamp

Exhaustive tests made by putting one Coleman mantle and one of any other make on the same lamp or lantern at the same time, then subjecting it to severe and constant jars will show which mantle will stand the hardest usage. This test invariably shows that common mantles will open at the seam or fall away while a Coleman Mantle will hang on long after the others go to pieces.



Showing Method of Reinforcing Bottom.

Coleman Mantles are constructed of No. 36 Egyptian long fibre cotton, closely knit to produce the proper lighting effect after burning off the cotton. They are full size and non-shrinkable, and we use the best grade of asbestos string which holds the mantle firmly to the burner cap.

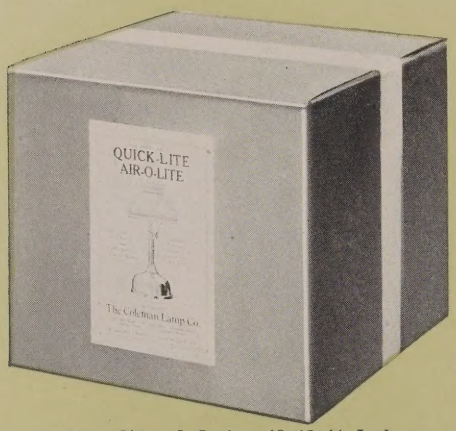
Coleman Lamps Are Guaranteed

All Coleman Lamps and Lanterns are fully guaranteed as to material and workmanship. We cheerfully replace free of cost, at our factory, any lamp or lamp part that has proven defective.

When handled according to directions, a Coleman Lamp will last for many years. Hundreds of them have been in constant service for more than ten years and are giving nightly satisfaction to their owners.

It has always been our policy to take an extremely liberal attitude towards dealers in Coleman Lamps, believing that a satisfied customer was our best advertisement, and that building "Good Will" was the chief aim of our Sales and Advertising Departments.



CQ307. Size of Carton 12x12x11 Inches.

Packing and Shipping

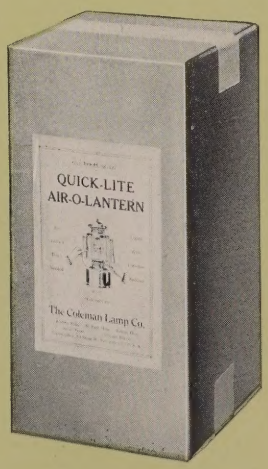
Quick-Lite and Air-O-Lite Lamps and Lanterns are put up complete, one in a strawboard carton, in the least possible space, and carefully packed to prevent breakage. They are safely shipped by freight, express or parcel post. When ordered in quantities of three or more the cartons are crated together for convenience in handling.

As Lighting Plants vary in size and style, they cannot be put up in uniform cartons or boxes, but are carefully packed of material as light as the conditions justify, taking into consideration the weight, destination and method of shipping.

When possible, glassware should be ordered in the original packages as received from the glass factories. Quantities will be furnished on request.

Export orders are packed as above and the cartons fully boxed and ironed, in accordance with the best shipping practices. Purchasers' instructions as to marking and shipping are carefully followed at all our houses.

Repair Lists showing numbered parts with prices and directions for all lamps and lanterns are packed with each one.



LQ327. Size of Carton 7x7x14 Inches

Prices

On account of the occasional necessity for changes in price, quotations are issued on supplemental sheets consecutively numbered.

"GOOD NIGHT MOTHER"

DESIGNED
AND PRINTED BY
THE GRIT PRINTERY
WICHITA, KANSAS, U. S. A.

LL works of taste must bear a price in proportion to the skill, time, expense and risk attending their invention and manufacture. ¶ Those things called dear are, when justly estimated, the cheapest. They are attended with much less profit to the maker than those which everybody calls cheap. ¶ A disposition for cheapness and not for excellence of workmanship is the most frequent and certain cause of the decay and destruction of arts and manufacturers.

—*RUSKIN*
